ENTERPRISE SYSTEMS · AI WORKFLOW AUTOMATION · GLOBAL TEAM OPERATIONS

Product Design Leader & AI Systems Architect

I am a Product Design Leader with a computer programming degree, 10+ years of enterprise SaaS experience, and an international footprint spanning three countries (US, Austria, Ukraine). I help businesses solve hard technical problems: building scalable design organizations, aligning distributed squads, and turning non-deterministic AI into reliable, automated workflows that drive adoption and revenue.

OPERATING PRINCIPLES & LEADERSHIP

ARCHITECTURAL RIGOR

Executable Truth Over Consensus

Prototyping complex logic, API constraints, and state flows directly in code. Replacing subjective debate with empirical validation so teams decide with evidence before engineering commits sprints.

TALENT MULTIPLICATION

Elevating Craft & Design Teams

Scaling team velocity through structured critique rituals, reusable component governance, and technical mentorship. Coaching designers to evaluate trade-offs and communicate directly with engineering peers.

SYSTEMS GOVERNANCE

State Architecture Before Artifacts

Structuring underlying data schemas, token pipelines, and latency budgets before finalizing visual screens. Interfaces are treated as resilient state machines, not static canvases.

GLOBAL SCALE

Distributed Team Cohesion

Unifying product, design, and engineering talent across US and European hubs through asynchronous design ops. Bridging transatlantic communication nuances to build high-trust, low-drag squads.

2025 — PRESENT · VIVIDLY & ADVISORY

AI Dashboard Synthesis & Human-in-the-Loop Architecture

Leading product design for the next-generation AI-agent-powered Vividly Hub, enabling operators to analyze complex retail data and generate new promotional and pricing datasets through autonomous agent workflows. Automated internal design team operations by introducing AI systems for automated feedback comments, design handoff submissions, and accelerated prototyping and usability testing.

2020 — 2025 · QUANTUM METRIC

Enterprise Platform Architecture, AI Governance & Observability

Partnered directly with the CEO and CTO on high-complexity technical initiatives, using a computer programming background to bridge engineering constraints and product strategy. Architected foundational system setups, workspace administrative permissions, and platform-wide AI governance controls. Shipped Visible (real-time web analytics, session overlays, and heatmaps) alongside automated PII masking engines, and designed the inspection workflows and audit logs that made Experience AI anomaly detection transparent and trustworthy for enterprise clients.

2019 — 2020 · EQUINIX

Distributed Cloud, Bare-Metal & Edge Infrastructure

Led 0-to-1 product design for three foundational infrastructure products from the ground up: Edge Metal, Millennium DB, and Edge Precision Time, while architecting their consolidation into a single enterprise Edge Platform portal. Directed end-to-end information architecture, user testing, and visual design systems, contributing directly to frontend code where needed. Worked hand-in-hand with engineering architects and key business stakeholders to resolve complex systems constraints and win executive investment.

2012 — 2016 · VIENNA PRESS BUREAU & CREATIVE DIRECTION

Agency Leadership & European Market Entry

Founded and scaled a Vienna-based creative agency, directing cross-disciplinary teams of designers, researchers, and journalists across multi-channel campaigns. Led creative direction and experiential design for major corporate launches, introducing emerging international products to European markets.
